ex01

Réimaginer un projet dans une track différente de celle pour laquelle il a été créé

GameSphere
* Idée originale : An application for creating addictive games on Android and iOS. The particularity of our application is to help implement mechanisms to accelerate downloads and quickly reach over a million, which then offers numerous opportunities to creators. For example, our demo game, a tamagotchi-like, has been downloaded over 1,400,000 times on the Google Play Store.

* Idée track TFG : Creation of an app to allow more users to create video games, half way between Godot and Scratch, the purpose is to popularise video game developpement to allow users to see it throught the scope of therapy (maybe the use of AI may help but fo).

* Idée track Tech : Creation of an open-source translator between game engines (a bit like the same way REA does to mix any games with others, it interprets events and recreates it by any means it can).

TrackPulse

* Idée originale : An application for collaborative railway information. It allows users to stay informed in real-time about the status of their train line or station. The user can search for their train or station and access all the information provided by SNCF and the rest of the community. This application allows users to submit a range of information related to user comfort: heating/air conditioning issues, ticket vending machine malfunctions, etc. Users can also report information, vote on those submitted by their peers to ensure accuracy, add trains to favorites, and much more!

* Idée track TFGr : An app that gathers or only access it an feed it to a deep learning model trained on worldwide human flux to optimize the use of public transportation and the optimisation of its maintenance, contributing to better consumption of energy and less loss due to incompetency.

BreathLink

* Idée originale : A solution designed for individuals suffering from cystic fibrosis. It combines connected devices, web and mobile applications, and coordination with medical personnel to offer personalized and tailored monitoring for this chronic condition. The patient regularly measures their respiratory parameters using a connected spirometer, without needing to visit a healthcare center. An alert threshold can be set with their physician, who is directly notified in case of exceeding it, enabling prompt initiation of treatment without delay

* Idée TFG-ENT-TECH : Creation of an implant directly in the human body to monitor respiration flow and alert emergency services

What would be our project idea if we had to combine Vision, audio & traitement du signal + Utiliser la caméra + Solidarité & inclusion

Application qui utilise la caméra de témoins de violences policières pour upload en temps réél le flux vidéo et permet de traîter l'audio afin d'isoler les bruits parasites et essayer de compenser toute altération du flux en question (fumigènes, lacrymos, effet stroboscopique des boucliers/lampes de poche) et essayer de recupérer le RIO pour pouvoir plus tard monter un dossier de plainte

It is not much inclusion but providing proof of an aggression by a cop for someone who can’t film because they are getting beaten is all about solidarity

What would be our project idea if we had to combine Robotique et Systèmes Embarqués + Utilisable sans savoir lire + Introduire du hasard là où il n'y en a pas

Création d'un boitier captant les signaux des feux de passages piétons, deux boutons, un pour l'allumer, un autre pour régler le volume, l'objectif est d'annoncer quand traverser mais parfois, l'appareil ment et dit de traverser alors que le feux est rouge.

Event though it was more about trolling because it was all the cards inspired me and I find it pretty funny, I think it meets the requirements ;)

What would be our project idea if we had to combine IA & APPRENTISSAGE AUTOMATIQUE + Santé & bien-être + Commande vocale uniquement, sans écran

Une caméra dans la salle de bain qui observe comment tu te douches et est entrainée sur des vidéos réalisées par des professionnel·le·s de santé afin d'entraîner l'ia à savoir comment laver un être humain en fonction de sa morphologie et des ses handicaps, l'interaction avec le système se fait par commande vocale et conseille ou rapelle comment/où se laver ou les endroits qui n'ont pas été lavés

I think it meets the topic and scope + it is about a real issue, some people never knew how to wash and it can help, plus, some different morphology may make it difficult to take care of themselves
